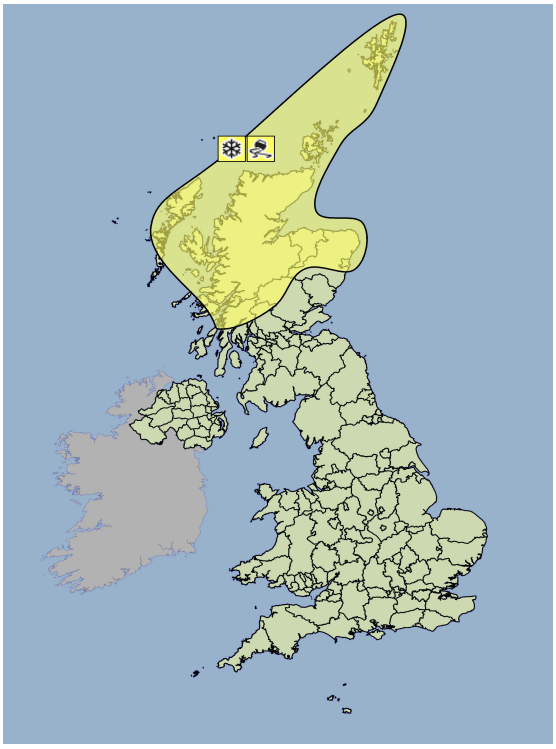
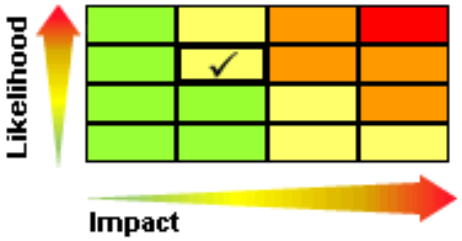
National Severe Weather Warning Service





Chief Forecasters Assessment
The cold, showery northwesterly airstream will persist bringing further wintry showers. During the day any accumulations on the roads will be slight and temporary but will settle more readily from Tuesday evening as road temperatures fall. In addition, where surfaces have been left wet by showers, icy stretches will form, this risk continuing into the first part of Wednesday morning.

The Met Office have issued a **Yellow Warning** of **Snow and Ice**

Valid from **18:00 on Tue, 23rd Feb 2016** until **10:00 on Wed, 24th Feb 2016**

Sleet, snow and hail showers will continue to affect much of northern Scotland through Tuesday evening, overnight and into Wednesday morning. 3-8 cm is likely to accumulate on high ground above 200 m, with 1-5 cm possible on lower ground. However accumulations will vary widely, with some places within the warning area seeing little or no snow, especially at lower levels. Ice may also develop on untreated surfaces, or where repeated showers dilute treatment.

Please be aware that the icy stretches and snow may lead to some difficult travelling conditions and some low level disruption, especially over the higher routes.
